DETAILED ACTION

Drawings

1. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because the drawings appear to be photocopies from an original set, which make it hard to discern certain items of the applicant's invention, as well as mask some parts, such as figure 4a. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 31 and 33 are rejected under 35 U.S.C. 102(b) as being anticipated by Tisma (US 5,170,610).

In regard to claim 31, Tisma discloses the invention as claimed including a transfer system acting in cooperation with a bagger (not shown, but upstream of conveyor 46) and a cartoner system (not shown, but downstream of direction "A"). The conveyor self adjusting to support asynchronous or independent operation of the bagger

and cartoner (see abstract, Fig.1 and C3,L24-62).

In regard to claim 33, Tisma discloses the invention as claimed including a transfer system, bagger system and cartoner, where the operation of the bagger is uncoupled (unattached) to the cartoner (see abstract, Fig.1 and C3,L24-62).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 32 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tisma in view of Reuter et al (US 4,262,470).

Tisma discloses the invention substantially as claimed including a transfer system acting in cooperation with a bagger (not shown, but upstream of conveyor 46) and a cartoner system (not shown, but downstream of direction "A"). The conveyor self adjusting to support asynchronous or independent operation of the bagger and cartoner (see abstract, Fig.1 and C3,L24-62). What Tisma does not disclose is the specific use of a vertical bagger to package the product. However, Reuter teaches that it is old and well known in the art of packaging to provide a machine with a vertical (VFFS, generally indicated at 20) bagger which bags product and then places the product on an outgoing conveyor 75, for the purpose of packaging and shipping a product to a further manufacturing operation (see Figs. 1,2,4 and C2,L48 – C3,L39).

Art Unit: 3721

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the invention of Tisma with the vertical bagging means as taught by Reuter for the purpose of packaging and shipping a product to a further manufacturing operation.
